

## **OVH trusts Vade Retro Technology to protect e-mail servers of its clients**

**Hem, December 5th 2011** – OVH, the leading hosting company in Europe, is to retain Vade Retro Technology to protect the e-mail server of its clients.

Following a comprehensive study based on extensive tests of performance and efficiency in a high-volume messages environment, the anti-spam and the outbreak anti-virus solution proposed by Vade Retro has proven its performance and accuracy both in the contexts of inbound and outbound e-mail filtering.

"With the desire to provide ever more innovative solutions to our customers, we are pleased to integrate the Vade Retro protection within our messaging infrastructure," said Pierre OURDOUILLE, Systems Engineer at OVH. "We were also impressed by the expertise of Vade Retro Technology engineers able to respond quickly and effectively to our customization needs."

Gregory LEPOUTRE, Sales Director of Vade Retro Technology comments, "we are already working with many ISPs and more and more with big hosting companies. We are very pleased with the partnership signed with OVH, regional player known internationally, and also known to be very demanding. This is very symbolic of the competitiveness of Vade Retro." He added: "We demonstrate once again our skills and our expertise in dealing with complex architectures of large daily e-mails volumes."

Expert engineers of Vade Retro Technology are working hard on optimizing the Vade Retro anti-spam technology to maximize spam filtering while maintaining a negligible false positive rate.

### **About OVH**

Founded in 1999 by Octave Klaba, OVH is an independent French company based in Roubaix. It is the leading hosting company in Europe and ranks 4th in the world for domain names (source Netcraft November 2011). Its major asset? An unequalled quality/price ratio on the market which makes it the true benchmark among Internet players.

With significant technological advantages, such as an exclusive cooling system for servers, OVH has

always encouraged innovation and performance while respecting an ecological and environmental approach.

Also hosting a number of radio and the largest network of game servers, OVH has recently stepped into a new challenge by becoming an Internet access provider. Firmly established in the global market, OVH is extending its expertise in Europe and beyond with a dozen of existing subsidiaries and newer to set up in the near future.

### **About Vade Retro Technology**

With more than 150 million mailboxes secured worldwide, Vade Retro Technology is the specialist of mailbox protection against all undesired messages, commonly known as « spam ». In addition to protecting the biggest French and International Internet Service Providers, Vade Retro protects more than 1 000 companies (SMEs and large corporations) as well as thousands of independant users.
